

Paul McWilliam
bellavista ANZ

Dear Partner,

CITREX H5 – Highest precision with maximum adaptability

The [CITREX H5](#) ventilator analyser offers a **wide range of features** ideal for biomedical engineers, independent service providers, anesthesia and respiratory equipment manufacturers. Designed for **unsurpassed precision** and reliability, the **H5 touchscreen** allows **maximum adaptability** to suit the user's most demanding needs.

Simplified ventilator testing with CITREX Apps

The [CITREX H5](#) ventilator tester supports and simplifies ventilator testing through the use of unique [CITREX apps](#). imtmedical has **published** the first **two apps for the CITREX H5**. They are both designed to test [bellavista ventilators](#). Users can easily run these apps to guide them through **performing a quick test** and **verification testing**. Once the processes are complete, the **apps automatically create test reports** as PDF file. Reports can be **viewed and deleted directly** on the device and **exported via USB drive**. The apps help to **perform test sequences much faster**.

Flexible presentation

The [CITREX H5](#) can **measure gas flow** in **8 different gas types** which can be represented with **17 different gas standards**. Individual measurement values can be selected and arranged on the **screen freely** so that, in just a few seconds exactly those the **user needs most are displayed**. Customized arrangement of the parameters on the display can be **saved as profiles** and **transferred to other CITREX H5**

devices. With this feature it is possible for all devices within a company to have **identical displays** adapted to the professional field.

Adjustments by a finger tap

On the [CITREX H5](#) large **4.3-inch multi-touch screen** real-time data can be **displayed** as a single **waveform** or **two at the time**. By simple tapping the waveforms **they can be frozen or enlarged** in order to view even the smallest deviations of the measurement. The device also generates **statistic values** which improve the analysis of the measured data.

Available in our webstore

The [CITREX H5](#) can be bought **directly** in our [webstore](#). The **all-in-one test device** is available as a [biomedical test set](#) with **various helpful accessories**; including among others our [FlowLab software](#) for in-depth analysis of ventilation parameters, a [SmartLung adult](#) and an [oxygen sensor](#).

imtmedical ag at Medica 2017

From **13 to 16 November 2017**, imtmedical will take part at the Medica fair in Dusseldorf with our own booth. Visit us in Hall 11 booth 11E51 and learn more about our numerous innovations. We look forward to seeing you.
